## Learning Platform for Computational Photosynthesis

Sarah Philipps, Tobias Pfennig, Elouen Corvest, Marvin van Aalst, Lisa Fürtauer, Anna Matuszyńska

### Motivation

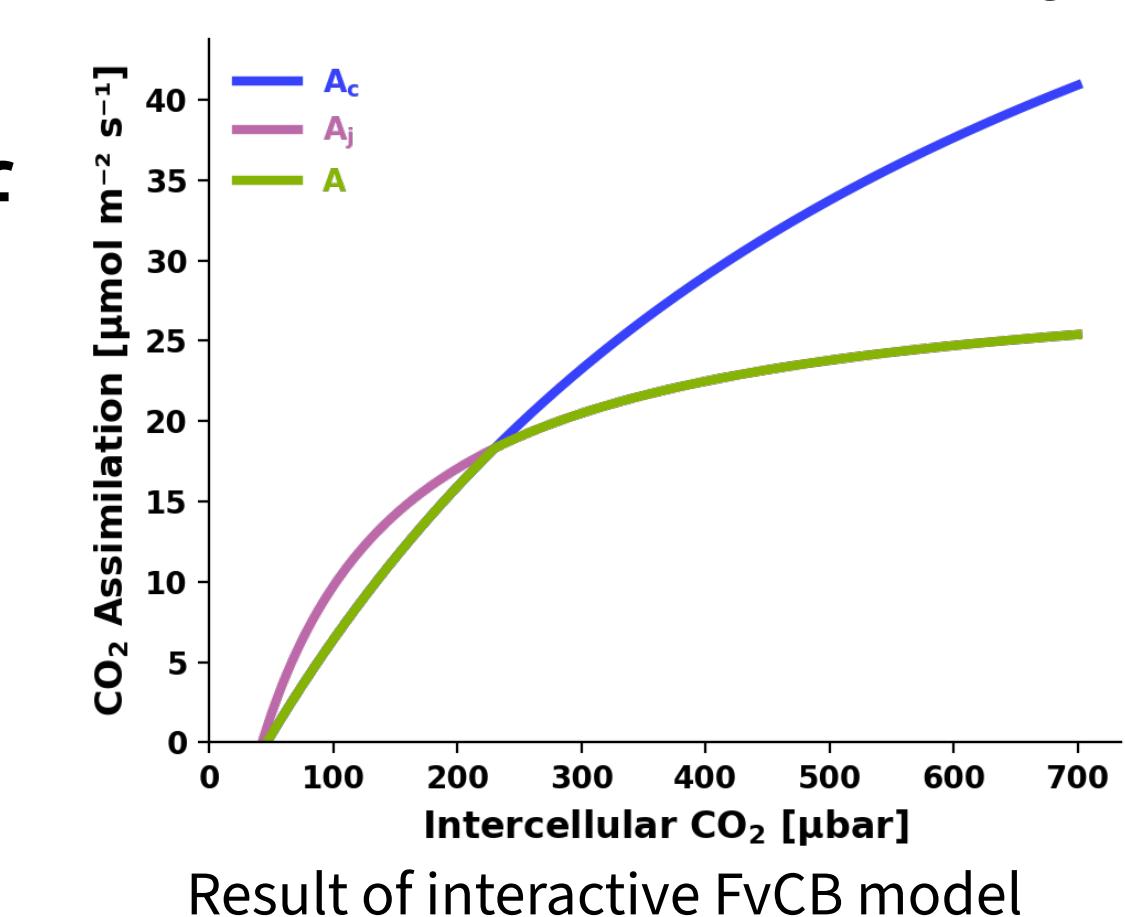

- Computational modelling allows a simplified, but cost-effective approach to system simulation
- Translation of complex construct into known mathematics

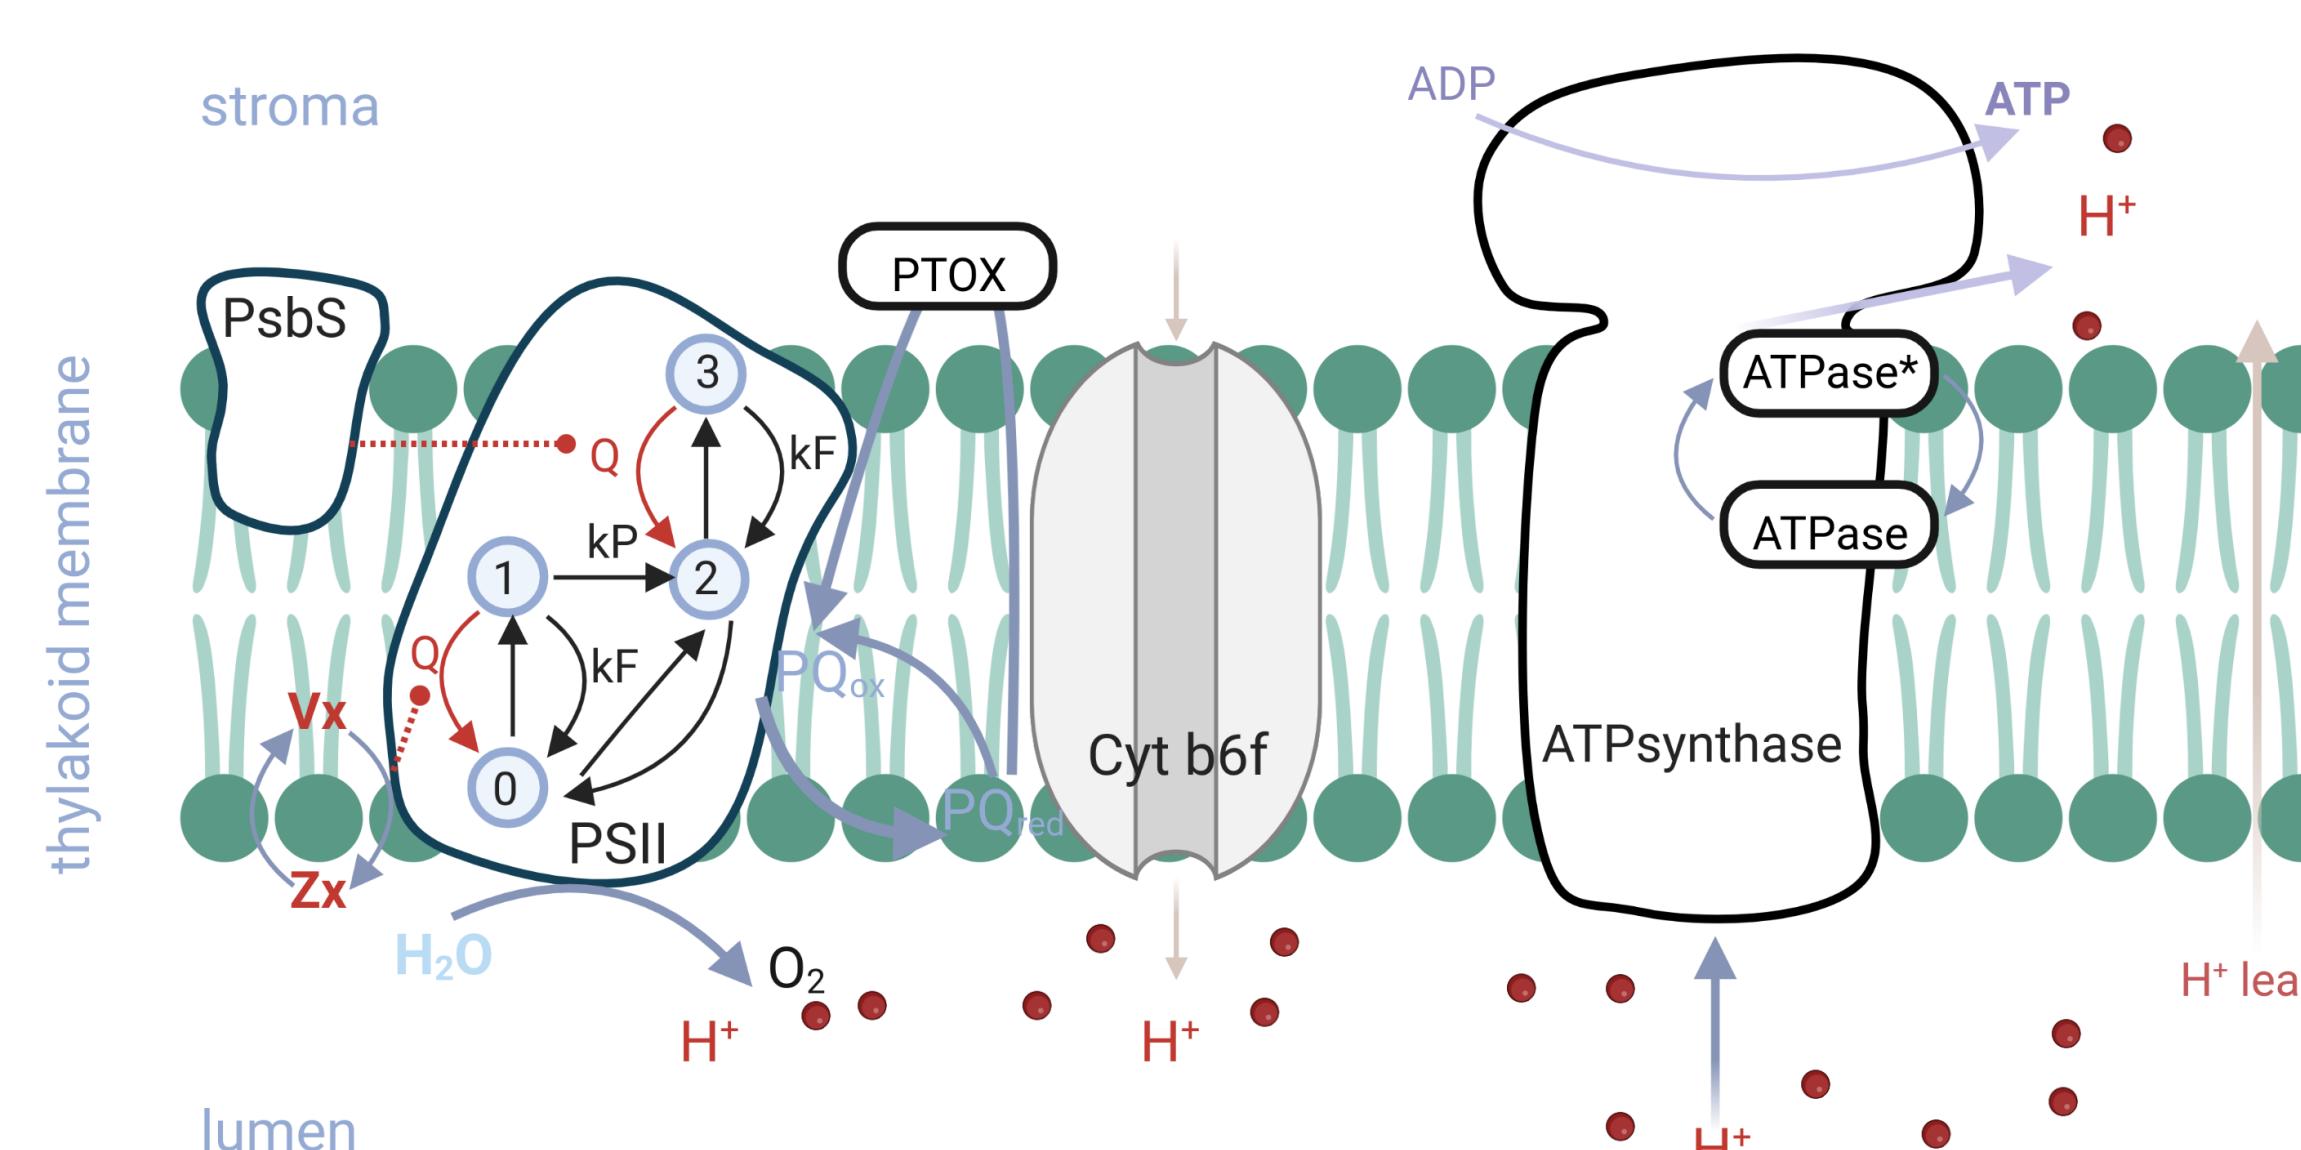

- Goes through an iterative cycle to find a viable answer to a problem
- Rise of complexity also means rise of programming need

### Implementation

- No-code, simple WebApp based on Streamlit<sup>[1]</sup>
- Separated versions based on differences of biological knowledge
- Includes different mediums to show introductory teaching materials
- Gives in-depth explanation of modelling and provides several examples of models of photosynthesis, e.g. Farquhar, von Caemmerer, Berry (FvCB) model<sup>[2]</sup> of carbon assimilation

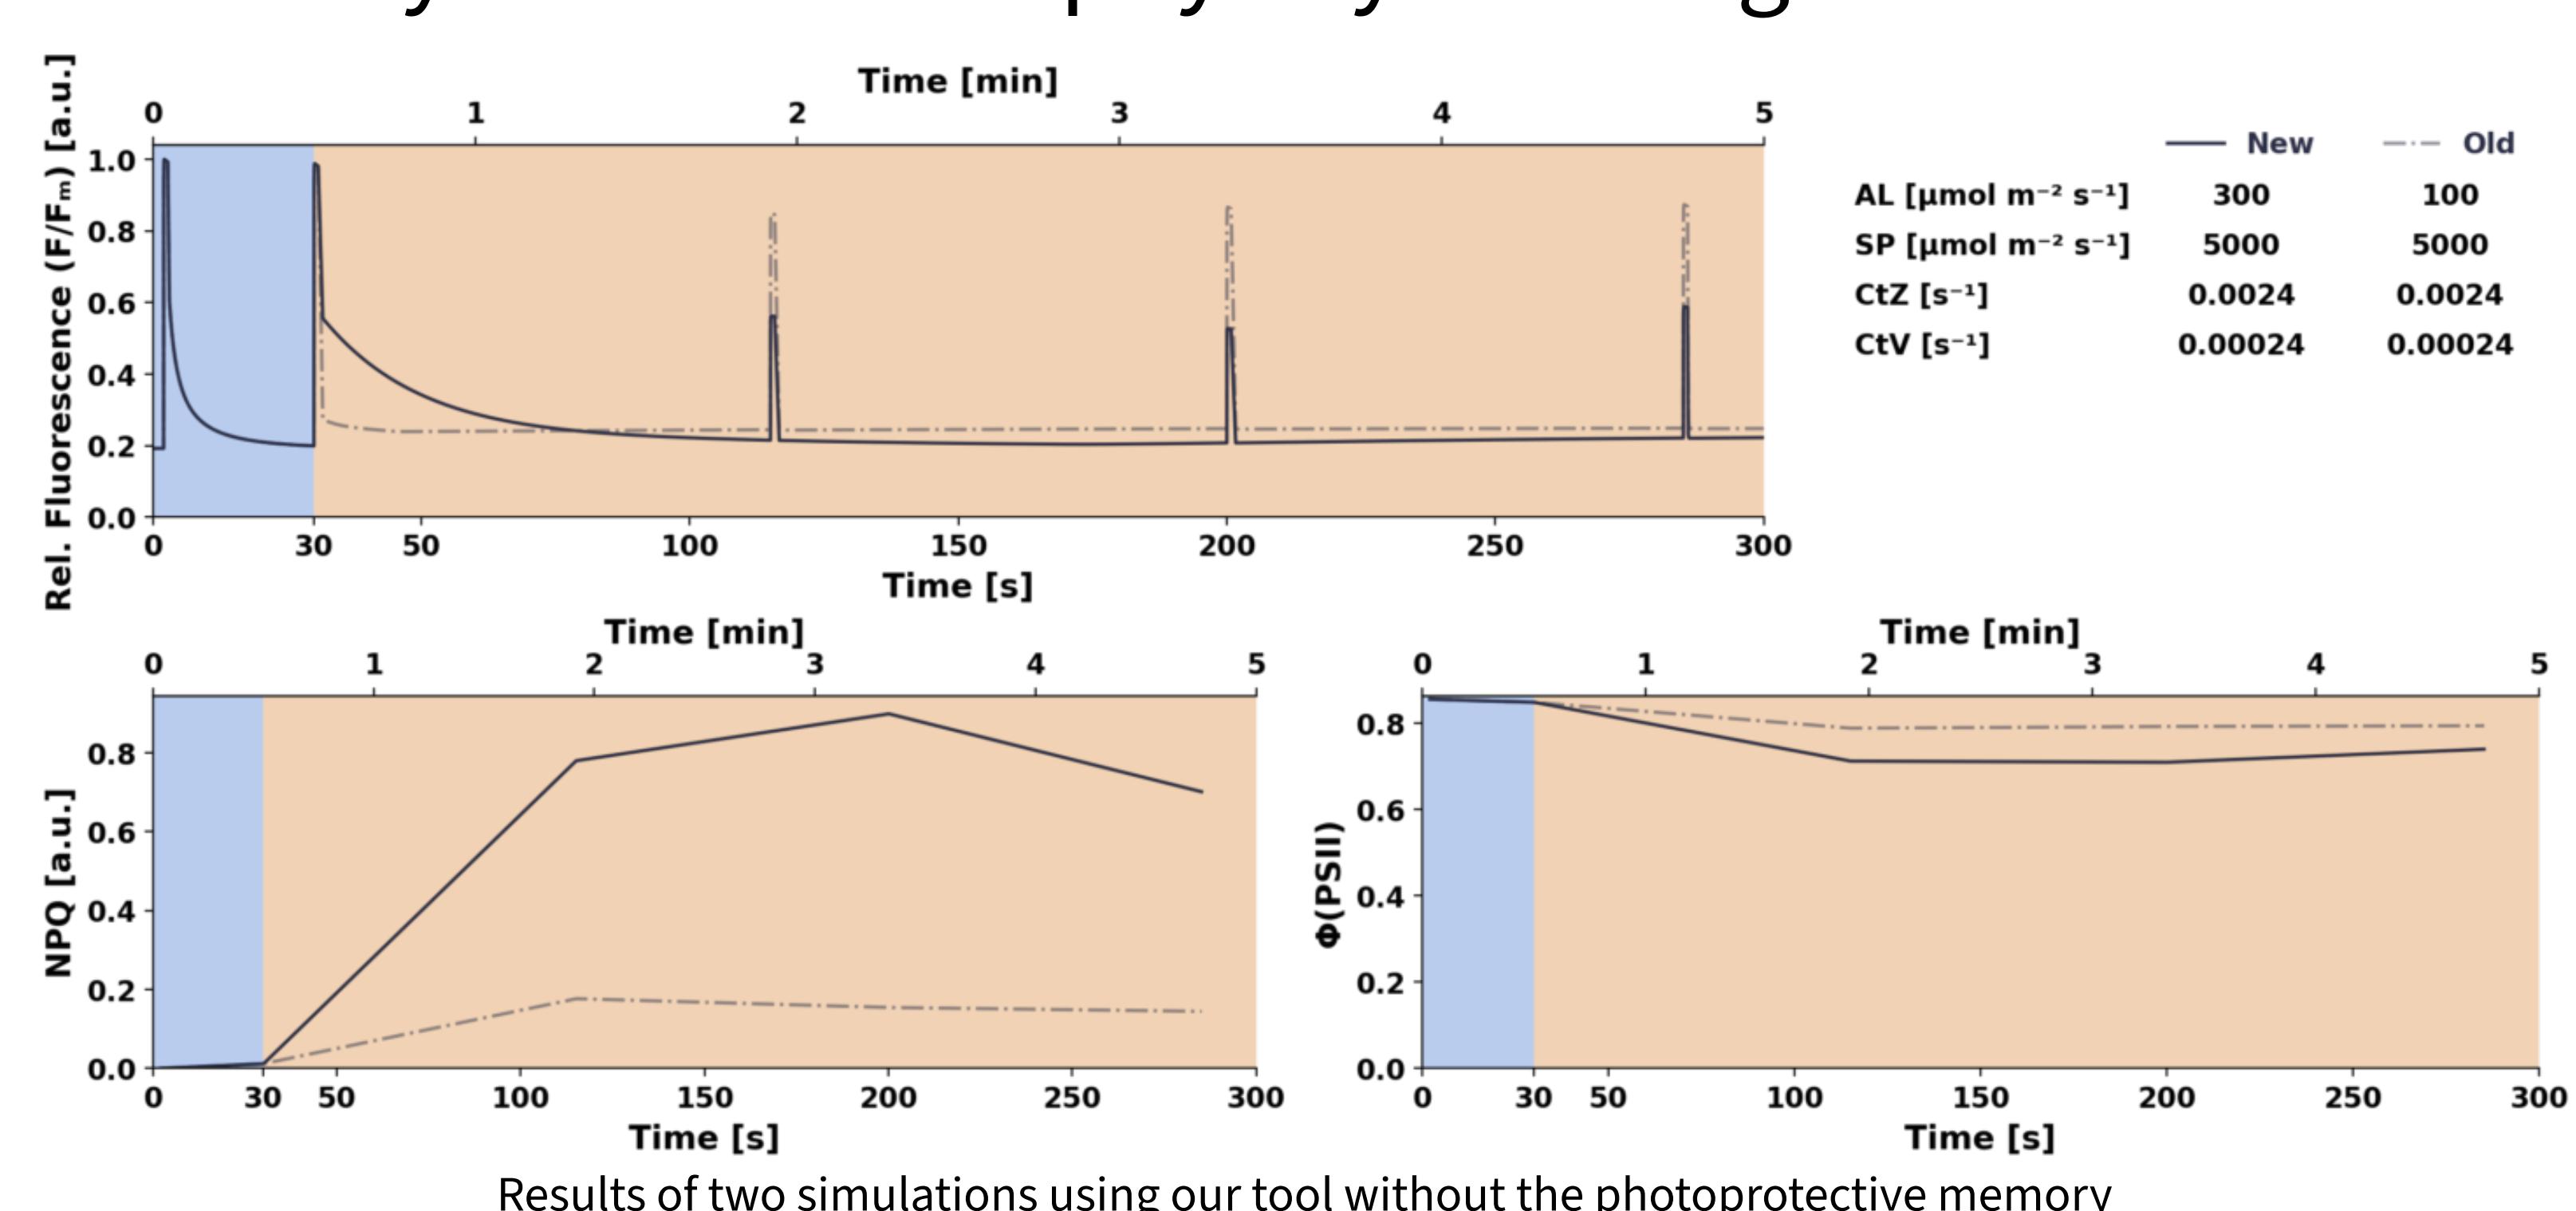

### Model

- Only includes processes affecting/regulating non-photochemical quenching (NPQ)<sup>[3]</sup>
- Uses in-house package *modelbase* and solely Python
- Strict reductionist approach allows system of six ordinary differential equations
  - The reduced fraction of the plastoquinone pool ( $PQH_2$ )
  - The stromal concentration of ATP (ATP)
  - The luminal proton concentration ( $H^+$ )
  - The fraction of non-protonated proteins ( $PsbS$ )
  - The fraction of violaxanthin in the total pool of xanthophylls ( $Vx$ )
  - The fraction of active ATPase enzyme ( $ATPase^*$ )

### Simulation

- Simulation of Pulse Amplitude Modulation (PAM) by changing specific parameters
  - Light intensity of light phase (AL)
  - Conversion rate to Zeaxanthin (CtZ)
  - Conversion rate to Violaxanthin (CtV)
  - Light intensity of saturating pulse (SP)
- Get relative fluorescence, NPQ, and PSII efficiency ( $\phi$ ) and compare it to prior result
- Includes guiding questions, that help with explaining and interpreting the graphs
- Additionally simulate superficial photoprotective memory of the xanthophyll cycle using the same model

### Open-Source

- Project is completely available to public
- Code is modular, so own changes can easily be done locally
- Tool is available in various languages:
- We encourage making changes which we may implement in the future, e.g. more translations
- Contact us for any questions or wishes for changes! (elouen.corvest@rwth-aachen.de)
